

U.S. ECONOMIC UPDATE

The arrival of the COVID-19 pandemic has created an economic shock that has likely pushed the global economy and the U.S. into recession. Policies initiated to “flatten the curve” of potential infection include the voluntary and mandated shutdown of large sectors and regions of the economy. Retail establishments, restaurants, passenger transportation, schools and leisure activities have almost all grinded to a halt while customers self-quarantine and practice social distancing.

RECORD-SETTING LAYOFFS, DECLINING EMPLOYMENT

Over the last two weeks (ending on March 28th), a cumulative 10 million people have applied for unemployment benefits—by far the largest number of applications in history since record-keeping began in 1967. Initial unemployment claims are a highly reliable leading indicator of trends in labor markets and therefore the economy at large. Given the size of the increase, along with other high-frequency data trends that are similarly bleak, it is widely believed that the U.S. economy has entered a recession. This was reinforced in early April when the Labor Department reported that payroll employment in the U.S. fell by 701,000 jobs in March, one of the largest declines in history. It's all but certain that even more jobs will be lost in the months ahead.

Given the way these events have unfolded and the huge number of layoffs, the current thinking among economic forecasters is that the second quarter of 2020 will see one of the largest real GDP declines in U.S. history. What is less clear is what the economic trajectory will be following Q2. As of this writing (4-7-2020), hopeful signs are emerging that policy steps to “flatten the curve” are beginning to work in certain areas, but many unknowns remain. It is too soon to say if these signs are sustainable and how they will impact the trajectory of the economy.

We continue to monitor developments extremely closely and are working around the clock to publish data and insight as quickly as possible.
