ECONOMY

In the first half of year 2024 the Mexican economy had sluggish activity, but in a stable position. The phenomenon of “nearshoring” relocation of productive chains has continued to dominate the conversation, without there being a strong effect yet, or any large-scale event to support it. Concerns associated with a high inflation environment maintain their profile and the uncertainty associated with the political environment has seen a calm electoral process that has concluded. In general, the Mexican economy continues to show stable behavior and moderately expansive activity, despite a complex global economic environment.

DEMAND

In line with the moderate progress in overall economic activity, the office market in Mexico City has had a small expansion. It continues in a stable position at a new level of balance, after the shock of the Covid pandemic. At the end of the first half of 2024, the total volume of net demand (absorption) for class A offices amounted to 111,036 square meters, while the general market, which includes buildings of all classes, had an absorption of 120,171 square meters. This means that there was finally a positive absorption in class B and C buildings. This behavior shows that the migration to higher quality buildings continues, but the market is now also recovering for buildings of all standards. The magnitude of net demand for class A buildings is now at 87% of its pre-pandemic level. The general availability rate stood at 18.2% at the end of the second quarter, a decrease of one percentage point compared to its level at the end of the same quarter in 2023.

The recovery in demand remains widespread but uneven among the city's different office submarkets. Some, such as Polanco or Insurgentes, show volumes in line with their pre-pandemic levels. Others, like Santa Fe, are still recovering. However, in these cases it is expected that some transactions soon to be closed, including important conversions to new land uses, will allow troubled submarkets to resume positive expansion. In any case, it is clear that the highest profile buildings continue to perform well, taking advantage of the desire that many tenants have to relocate to higher quality properties.

By type of industry, demand is quite heterogeneous, but in the first half of the year, technology companies and contact centers had a relevant presence.

MEXICO CITY

Office Q2 2024

SUPPLY

The volume of projects with active construction work continues to decline. It is currently located slightly above 350,000 square meters. This is less than a third of the average volume that existed before 2019. If we contrast this with the average demand, which is lower than what it was in that period, we can see that developers have paid attention to the important challenge that has offered the economic environment of recent years. In absolute terms this is leading us to an inflection point, where demand exceeds new supply. Both at levels lower than their recent historical volumes, but already in a balance where the market presents good opportunities for new buildings that have just been built.

At the same time, the conversion of some office buildings to residential, medical and educational use continues to evolve. To date, a dozen conversions are already underway, which will total just over 200,000 m²; This is still a small amount, as a proportion of the total built inventory, but it is already beginning to have relevance, as an absolute volume.

PRICES. The new balance

At this time, a more stable asking price level is already taking place. The decline observed in previous years stopped in 2023 and there is already a small upward adjustment in prices. Specifically for class A buildings, the adjustment has been 2.7% compared to the prices observed at the end of the first quarter of 2023 and they are quoting on average \$23.36 dollars per square meter per month. There continues to be an important contrast between different properties; For the highest profile ones in the Lomas area, there are already cases where the asking rent price is above \$40 dollars per square meter per month.

Perspective

- The behavior of the market in the time since the end of the Covid pandemic has made it clear that the use of offices is back, although under new organizational schemes and different intensity of use; this will continue to evolve. Supply today offers the best office buildings that have ever existed in the city. Technological and design advances lead one to expect the construction of even better buildings.
- Clearly there is greater flexibility in the use of spaces and “mobile” jobs – those that combine various locations: offices, home and coworking spaces – are increasing their participation. Office spaces will continue to play an important role in the organization of work.
