Cross-Laminated Timber (CLT) represents the next generation of high-performance wood building technology. What is CLT?

- ✔ CLT is a large flat-panel engineered wood product made from pressing perpendicular layers of lumber together with adhesive
- ✔ The fusion of orthogonal wood layers provides CLT biaxial strength, durability and stability
- ✔ CLT is naturally fire resistant. In a fire event, the wood mass will produce a char layer protecting the structural integrity of the CLT panel
